Support your U.S.-based employees with our robust maternity program

With Aetna International, it's easy for you to provide special support to your U.S.-based employees and their families. Through the Aetna® Enhanced Maternity program, they'll get robust education, resources and more — through all parts of their maternity journey.

A solution for maternity support

Going through a maternity journey is different for everyone. That's why our holistic, end-to-end family building solution helps all of your U.S.-based employees, wherever they are during this experience.

So whether they need support for family planning, fertility* or postpartum care, we'll be right there as a trusted, reliable resource.

Here's how your employees will benefit

The enhanced program will help us:

- ✓ Better identify and engage more of your pregnant employees early on, not just those at high risk
- ✓ Support your employees from preconception through postpartum
- ✓ Give trusted information and guidance about family planning, fertility* and postpartum care

Let's work together to help your employees have a healthy journey

With the Aetna® Enhanced Maternity program, you can give all of your employees the support they need, whether they're thinking about starting a family, facing infertility or already pregnant.

Special features set this program apart

Guided genetic health

For those who are thinking about starting a family or are already pregnant, we offer genetic counseling (by phone) with board-certified genetic counseling experts. We also offer convenient, confidential and cost-effective genetic testing.

Fertility advocate*

For those facing infertility, our nurse advocates provide extra support. They'll explain what to expect, review treatment options and go over fertility terminology. And they'll also help your employees navigate the journey through pregnancy and postpartum if they have any risks.

Predictive analytics and condition support

We use advanced data science approaches to identify risk factors in pregnancy. We provide education and support to those who may have higher risks and conditions to help improve their health and lower medical costs.

Education to address racial disparities in maternal health outcomes

It's important to offer enriched support for pregnant people of color to help close health equity gaps in care. So we provide enhanced education, preterm labor prevention resources and more. And we provide non-bias and cultural awareness training to our nurses.

*Fertility advocate does not apply to Fully Insured.

Aetna is the brand name used for products and services provided by one or more of the Aetna group of companies, including Aetna Life Insurance Company and its affiliates (Aetna).
